

Application No.: 10/627,246

Amendment dated: March 21, 2007

Reply to Final Office Action of: October 31, 2006

**REMARKS/ARGUMENTS**

The examiner has allowed claims 9 through 13. Claims 1 and 7 have been amended to more accurately define the invention claimed. The specification has also been amended to conform to the drawings.

Korteweg (United States Patent No. 4,952,204) discloses a cotton swab affixed within a sleeve with a narrow handle portion that closely conforms to the swab stick and a substantially larger diameter receptacle portion that encloses the cotton ball at the end of the swab stick. The narrow handle portion minimizes the amount of the contained substance that can seep along the length of the swab stick. At the tip of the narrow handle portion is a section with an even smaller diameter than the remainder of the narrow handle portion to enable the frictional engagement of the tip of the swab stick to the sleeve.

Applicant's invention is an enclosed applicator comprising an applicator with an applicator tip sealed along with a fluid within an elongated housing. In contrast to Korteweg, a great majority of the fluid is disposed immediately next to the elongated body of the applicator. An opening means is provided near the applicator tip. The applicator and the elongated housing are formed as a single unit. When the elongated housing is opened through the opening means, the applicator tip is exposed and the fluid in the elongated housing may be applied by the applicator tip to desired locations.

In an alternate embodiment, the enclosed applicator comprises an applicator with an applicator tip affixed to one end of an elongated member sealed along with a fluid within an elongated housing with an opening means closer to the applicator tip than to a second end of the elongated member. A great majority of the fluid is disposed immediately next to the elongated

member as oppose to Korteweg where a great majority of the fluid is in the receptacle next to the cotton tip, away from the elongated portion. When the elongated housing is opened through the opening means, the applicator tip is exposed and the fluid in the elongated housing may be applied by the applicator tip to desired locations.

Applicant hereby submits that the objections to the specification and the claim rejections under 35 U.S.C. §102(b) and §103(a) have all been overcome. Therefore, applicant respectfully requests that a timely Notice of Allowance be issued in this case.

Respectfully submitted,
